EDUCATION

B.Sc. Computer Science · King Saud University

(Exp. 2027) · Riyadh

Misk Distinct Scholar · Mawhiba Scholarship Recipient

EXPERIENCE

Founding Member & Product Lead · Saleaah

Oct 2024 – Present

Saudi B2B F&B supply platform — 215+ restaurant clients across Riyadh, SAR 9.3M total revenue.

- Identified 39% monthly churn as a structural risk through exit interviews and cohort analysis; pinpointed delivery-app payout delays as the primary driver and proposed a FinTech-focused product roadmap
- Reduced lead-to-close cycle from **21 to 7 days** by process-mapping the sales workflow within 8 weeks.
- Validated initial market opportunity through structured outreach to **1,000+** prospects; driving **40% adoption** increase and **150% MoM** revenue growth (**SAR 280K to SAR 1.5M monthly**).
- Designed operational database across the company; increased operational bandwidth by 55% and halved time-to-resolution across pricing, order creation, and complaint handling.
- Built the business case for a full strategic pivot: currently piloting
- Architected an invoice financing platform to solve restaurant cash-flow illiquidity.

Producer & Research Lead · AHHIL, Thraa & Google Developer Clubs

Sep 2025 – Present

- Conducted interviews with senior consultants, synthesized findings into content used by **80K+** views.
- Designed and delivered **20+** workshops and seminars on consulting methodology, case frameworks, and industry analysis, translating practitioner insights into structured learning for a student audience.
- Built in-house production capability, eliminating vendor dependency while maintaining editorial quality.

Category Expansion & Product Intern · Soum

Nov 2023 – Jul 2024

- Conducted analysis of the Gaming category across 400+ SKUs; identified misclassification as root cause of returns and implemented changes that reduced return requests by 20%.
- Identified seller inventory visibility as root cause of unfulfilled orders; designed and deployed a seller notification system that reduced unfulfilled orders by 25%.
- Led cross-functional redesign of listing and purchase journey — transaction time down to sub-60 seconds.
- Executed WhatsApp marketing campaigns using customer segmentation, cross-sell flows, and cart-abandonment targeting SAR 1M+ generated in high-ticket revenue over two months.

SELECTED PROJECTS

GPU Frame Analysis & Optimization Engine · Creator

Feb 2025 – Present

A performance profiling pipeline diagnoses graphical rendering bottlenecks and provides step-by-step fixes.

- Designed a multi-layer architecture that replaces subjective optimization with hardware-mapped budget targets: custom rendering optimization engine, calibrated against scene type and GPU hardware tier.
- Built a dual-trigger frame capture pipeline, reactive capture on FPS-drop events, extracting SM occupancy, L1/L2 cache miss rates, PCIe throughput, and rasterizer saturation from raw telemetry CSVs.
- Designed a constraint-based LLM evaluator: CPU vs GPU bottleneck classification, math-bound vs memory-bound diagnosis, translation to specific engine console variables, render, and architecture fixes.

SKILLS

Languages: English (Fluent), Arabic (Fluent)

Analytics & Tools: Excel (advanced), PowerPoint, Tableau, Google Sheets / Apps Script, Figma, Python

Methods: Market sizing & validation · Root cause analysis · Process mapping & optimization · Operational analytics · Quantitative modelling · Stakeholder interviews · Product requirements & road mapping
